Statement for NBC Los Angeles Bio Spot Flea and Tick Shampoo for Cats and Kittens

Central Life Sciences takes all concerns and claims associated with our products very seriously. We review each suspected adverse reaction case thoroughly, and work closely with pet owners, veterinarians, ASPCA's Animal Product Safety Service and the EPA to address concerns.

Bio Spot Flea and Tick Shampoo for Cats and Kittens has a proven wide margin of safety when used according to label directions and is an effective treatment for stopping fleas and ticks. With the use of Bio Spot shampoo, thousands of cats are spared from the suffering caused by fleas and ticks which can lead to skin allergy dermatitis, internal parasites, severe anemia and even death. In a review of reported adverse reactions over the past two years, cats showed no adverse effects 99.995% of the applications. Those cats which showed effects were typically classified as having mild or moderate symptoms.

All suspected adverse reactions are reported to the Environmental Protection Agency (EPA) and compiled to track any possible trends that might lead to further evaluation. Bio Spot products are registered by the EPA after undergoing years of rigorous testing. Unfortunately, many cases involve misapplication of the product, or using a product formulated for use on a dog and improperly used on a cat. We encourage pet owners to read and understand label directions prior to using the product.

At Central Life Sciences, we understand pet owners' concerns about the safety and efficacy of the products used on their family animals. We take our responsibility to the health and safety of pets very seriously and are committed to maintaining the trust of our customers.
